

Desktop Publishing Christmas Project Semester Exam

We will use Publisher and Photoshop for the following activities. By now, you should be comfortable enough with both applications to think of innovative ways to approach the tasks. You may use templates or blank publications to begin, but most of the work will demand your creativity. Use Mr. Janes' links to copyright-free resources if you need clip art or better yet, create your own!
Print a minimum of two copies - One for Mr. Janes and one (or more!) for you.

Coloring Book Pages (10)

Using clipart, create a book of ten (minimum) coloring book pages with a Christmas theme (portrait orientation). In Publisher, change an image to grayscale or use the recolor clipart feature to recolor the clipart to white and leave the black parts black. Some clipart (if the outlines are not black) will not be useful, so select carefully. Include a hollow outlined WordArt with a Christmas message. Include a name/age blank for the child entering the coloring contest somewhere on the coloring page. See links for a website with example coloring pages.

Ornaments (5)

For this project, you are creating a flyer that utilizes the drawing tools in Publisher. Create a layered shape similar to that below (comprised of four different shapes) and then layer to look something like the picture at the right (but be creative!). Make the filled oval and the stroke/border. That's the **basic** ornament. What can you do to impress me (and your loved ones)? We'll print it out on heavy stock and laminate it so it will hang nicely on a tree.

Photo Card (1)

Need I say more?
No directions at all on this one.
What can **you** do?
